A LIMITED ANALYSIS OF THE SARATOV AIRCRAFT
ENGINE PLANT NO. 292

This memorandum, which is for record purposes only, reports completion of Project 71.244. This project required precise measurements and the determination of heights of selected structures in the Saratov Aircraft Engine Plant No. 292.

A suitable map for scale determination was not available. An accurate scale was obtained by the measurement of a known dimension. Parallax measurements and the shadow factor techniques were both used in the determination of the heights of the selected structures. The results were presented directly to the requester in the form of an annotated photograph.
